The skeletal system includes all of the bones, cartilages, and ligaments of the body that support and give shape to the body and body structures. The skeleton consists of the bones of the body. For adults, there are 206 bones in the skeleton. Younger individuals have higher numbers of bones because some

Indeed humans are fortunate to have the entire skeletal system because it fulfills many important functions in the body. The skeletal system protects the soft tissues and vital organs; enables easier locomotion and serves as a framework as it shapes and supports the entire body.
