Newton's Second Law And Newton's

second law describes the affect of net force and mass upon the acceleration of an object. Often expressed as the equation $a = F_{net}/m$ (or rearranged to $F_{net}=m*a$), the equation is probably the most important equation in all of Mechanics.

We use Newtons (N) to measure force. Net force is the sum of all the forces and has direction. (Be sure to make right positive and left negative.) An object will move in the direction of the net (or unbalanced) force.

- 400 N + 200 N Net Force = + 200 N
- 400 N = - 200 N (left) Newton ' s

Second Law And Weight By

the behavior of objects for which all existing forces are not balanced. The second law states that the acceleration of an object is dependent upon two variables - the net force acting upon the object and the mass of the object. The acceleration of an object depends directly upon the net force acting upon the object, and inversely
