The Contemporary Acetabular Cup from Stryker is a cemented, flanged, polyethylene component used for primary or revision hip arthroplasty. The cup has methylmethacrylate studs on the base which are removable but which are intended to remove the risk of bottoming out. The flange can be trimmed to match the requirements of the acetabulum.

Stryker | Contemporary Acetabulum  
a standardised technique that involved an Exeter Contemporary flanged cup and Exeter Universal stem (Stryker Orthopedics, Mahwah [NJ], USA). Patients were excluded if they underwent bilateral THA or already had a THA or had a dysplastic hip on the contralateral side, as a normal contralateral hip was required to define the optimal socket position.

Benefits of Using Modern Cementing Techniques in the ...  
The Exeter flanged cup is a relatively new product which claims to have additional benefits with the inclusion of beads to prevent bottom- ing out of the cup and a firmer flange compared to the Charnley cup to prevent eversion of the flange and con- sequent extrusion of cement during cup insertion and pressurisation.

Supplementary Figure 1: Flow diagram of showing derivation ...  
Exeter unflanged cup generated higher initial and mean pressures compared to Exeter flanged cup. With CMW, there was no significant difference between the pressures generated by the cups. CONCLUSIONS: Our experiment suggests that flanged cups do not consistently generate significantly higher cement pressures compared to unflanged cups.
