Revised and enhanced, this concisely written second edition of *An Introduction to Continuous-Time Stochastic Processes* is a rigorous and self-contained introduction to the theory of continuous-time stochastic processes, stochastic integrals, and stochastic differential equations. Expertly balancing theory and applications, the work features concrete examples of modeling real-world problems from biology, medicine, industrial applications, finance, and insurance using stochastic methods.

An introduction to stochastic processes through the use of R. Introduction to Stochastic Processes with R is an accessible and well-balanced presentation of the theory of stochastic processes, with an emphasis on real-world applications of probability theory in the natural and social sciences. The use of simulation, by means of the popular statistical freeware R, makes theoretical results come alive with practical, hands-on demonstrations.

The second mixed raw moment, which is $(E[N(t)N(s)])$, is called the auto-correlation function of the stochastic process. And the acf for Poisson process with parameter (λ) is $E[N(t)N(s)] = \lambda st + \lambda \min\{s, t\}, \quad s, t \geq 0$
